

Avenues Access is an ambitious new concept rental company, specializing in job site safety services. We provide home builders and various other industries with safe, temporary walkway/entrances and indoor fall protection guardrails.

### Walkways, Ramps and Steps:

All walkways, ramps and steps are made of Grip Strut™ and structural aluminum. With an engineered weight load of 600 pounds. Grip Strut™ provides one of the safest walking surfaces for industrial environments you will find. The serrated teeth create the most rugged, anti-slip surface available. The Grip Strut™ product helps remove mud, snow and dirt from footwear, keeping the interior of the job site clean and safe.

The interlocking design of the sidewalks, ramps and stairs ensure no movement or "bucking" when more than one person is on them.

All walkways, ramps and steps are installed on site by Avenues Access System's personnel.

### Handrails:

The removable 42" handrails are quick in, quick out to allow access for large items.

### Serious About Safety.

The benefits accompanying our product lines are enormous. By providing a safe, state of the art access to job sites; you show your customers and sub trades that you are serious about safety.

The benefits when using our products far out weigh the investment of renting them.
